

To Set-up Vpc's:

- \* Login to your cloud provider.
- \* Go to the Vpc dashboard.
- \* Create a Vpc in each region, providing CIDR blocks.
- \* Inside each Vpc, make subnets in different AZs
- \* Ensure subnets don't overlap and are linked to the respective Vpc.

For internet access (optional).

- \* Create an Internet Gateway for each Vpc.
- \* Attach the Internet Gateway to the Vpc.

To Manage routing

- \* To Create a route table for each Vpc.
- \* Define routes for local traffic and internet access if needed.

for peering connections.

- \* Navigate to peering connections.
- \* Establish a new peering connections.
- \* Specify the Vpc in the other region for peering.
